Other Technologies: Symfony, Lucene, d3.js, node.js, TensorFlow, Docker, Apache/nginx, AWS, Webpack

EXPERIENCE

Web Developer at Environmental Dashboard   May 2016 - Present
Environmental Dashboard (environmentaldashboard.org) makes the invisible flows of water and electricity through communities visible and engaging. After joining at the end of my freshmen year, I spent 3 summers (40 hours per week) and 6 semesters (10 hours per week) working on the project, the latter half of which I worked as team lead with other student programmers. As a full stack web developer, my responsibilities included building and deploying web apps as well as managing database and server systems.

- 1,000+ commits on GitHub: *github.com/EnvironmentalDashboard*
- Website has over a thousand unique monthly users and growing
- Installed on kiosks across Oberlin as well as local cable channel 10; expanding to Toledo, Akron public schools, the Great Lakes Science Center, Cleveland 2030, the Mayor's Office of Sustainability and the North East Ohio Sewer District
- Built a popular community calendar for Oberlin at *environmentaldashboard. org/calendar/*, which other organizations feature in their website (see Ben Franklin, Oberlin Business Partnership)

Internship at Pulse Insights   Summer 2018
Pulse Insights is a quickly growing startup that helps corporate clients gather actionable data through embeddable feedback surveys. During my internship I wrote a Google Chrome browser extension and designed surveys for large corporate clients, including Benjamin Moore and Transunion.

Independent Projects
I worked as a freelance web developer, creating production websites:

- For Catharina Meints, a professor in the Oberlin Conservatory of Music: *catharinameints. com*
- For Veterans For Peace: *educationnotmilitarization.org*

Awards

- Bonner Center Award for Student Excellence in Community Engagement (April 2018).
